

Fender Eliminator

£135

The fender eliminator comes in two versions, one for the early Thunderbirds with the seat that has the catch and the other is for all Sports versions and Thunderbirds & Legends with bolt on seats. They are not interchangeable due to the fact that different sub frames are used.

Comes complete with rear light and number plate bracket.

They fit in place of the large and heavy rear mudguard. You retain the plastic section of your mudguard. This means that you still have a mount for the rear shock tank on the Sport version.

Easy to fit and really changes the look of the bike into more of a café racer.

Optional micro alloy LED indicators are available for an additional £24. They are available in black or chrome.

I can also supply a special flasher unit that will run LED indicators at the rear and standard “bulb” indicators at the front with the correct flash rate for £26

You can use the discarded rear indicators on the front of the bike. They are narrower and look neater than the original wider front indicators.

I also sell a micro fender eliminator designed to be use with the standard seat. You will have to make your own mountings for the rear light, number plate bracket and indicators. The micro eliminator is £38.

You can make a simple alloy bracket to mount the light and number plate bracket and the indicators can be mounted just under the sides of the seat but you need a few skills to make this.
